ShareView®
Mobile to Smart TV Multi-Content Casting

Tri-View

Introducing ShareView.

ShareView is a revolutionary solution that connects a secure, proprietary mobile app to the Smart TV in each exam room to facilitate collaboration, engagement, and workflow efficiency. ShareView enables care providers to clearly communicate about care with single, dual, tri and quad views on the Smart TV, quickly getting to information from multiple sources without turning their backs to the patient.
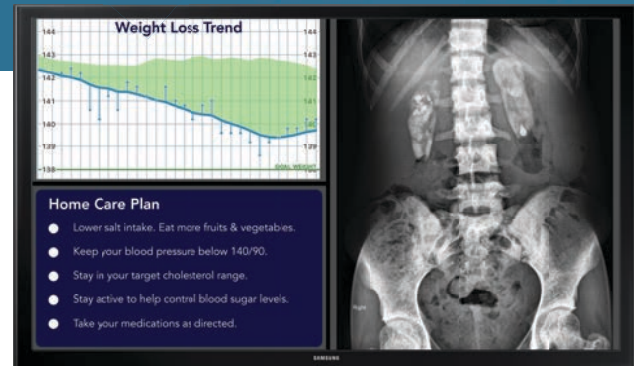

Whether between clinicians or between providers and their patients, this patent-pending technology creates a secure casting connection between the ShareView mobile app and a Smart TV application to concurrently display on-demand patient EHR data, medical imaging, educational content, facility operational data and more. ShareView utilizes the real estate of the large screen display to create a new clinical tool.

Improved healthcare through human connection.

Patients need to truly connect with their care providers in order to fully understand their diagnoses and engage in their treatment plans. The number one way to improve that connection is for a clinician to make more eye contact with the patient than with the computer, providing a better experience. ShareView advances the Smart TV display to create a new digital tool for better patient engagement.

Today's healthcare environment is extremely challenging.

The ongoing clinician shortages have led to serious staffing problems. At the same time, providers are under tremendous pressure to improve care, increase quality and reduce costs. ShareView can have a significant impact on staffing, cost and quality initiatives by improving workforce efficiency, patient safety and outcomes. The breakthrough ShareView technology increases clinician efficiency and workflow while streamlining clinical processes for better utilization of scarce resources.

Enterprise Solution
For use in health systems, hospitals, physician offices, clinics and homes

ShareView® By ShareSafe

ShareView Data Sheet

Product Architecture

- Applications for mobile devices and Smart TVs
- Grouped by user access for clinicians, patients or patient advocates
- Microservices architecture allows for feature addition per client deployment
- Supports unique interfaces based on situational needs

Featured Elements for Single, Dual, Tri, and Quad Viewing on a Smart TV Display

Media Content	Displays educational content from your video library, third party providers, or custom content produced for you by ShareSafe Media
CPT/ICD-10 Personalization	Provides educational content tailored to patients' diagnoses and procedures for viewing on the Smart TV
Clinician Virtualization	ShareView's split screen technology and tele-engine integration enables clinician virtualization, significantly impacting workforce instability, patient outcomes, operational efficiency and costs
EHR Integration	Simplifies and standardizes patient EHR data into understandable formats for educating patients utilizing a Smart TV
PACS Integration	Allows providers to display and discuss patients' medical images for improved understanding of procedures and conditions
Analytics Dashboards	Integration with business analytics application provides views of operational data for administrative and clinical decision-making
Checklists	Improves clinical tasks and patient discharge processes by automating and formatting health system's checklists for Smart TV display

About ShareSafe

ShareSafe is a healthtech solutions company that blends powerful mobile technology with media services in a secure network to improve value, enhance quality and decrease costs while focusing on the well-being of clinicians. ShareSafe's product suite includes Smart TV casting, single-sign-on integrations, secure care team communications and clinician education. From rural care centers to university research hospitals, ShareSafe's solutions prioritize the humanity of clinicians and patients for better outcomes everywhere.
